URL Object for Fetch

PR Link: <https://github.com/osmosis-labs/osmosis-frontend/pull/1936>

Conversation Link: <https://chat.openai.com/share/3790441c-57e1-49bf-9fae-085447fd3825>

```
const res = await fetch(
  `${this.baseNodeUrl}osmosis/concentratedliquidity/v1beta1/liquidity_net
_in_direction?pool_id=${poolId}&token_in=${tokenInDenom}&use_cur_t
ick=true&bound_tick=${boundTickIndex}`
);
```

convert this to use a URL object, and append parameters

ChatGPTChatGPTSure, to create a URL object and append parameters to it, you could do the following:

Code

The URL class provides utility methods for creating and managing URL strings. It makes it easy to add or modify URL parameters without needing to manually parse the URL string. The searchParams property of the URL object is a URLSearchParams object that allows you to easily manipulate the query string of a URL. Its append method adds a specified key/value pair as a new search parameter.
