Translate C++ comments to English:

```
__declspec(allocate(".i_alc$a")) const _PVFV i_allochan =  
(_PVFV)1; // na zacatek sekce .i_alc si dame promennou  
i_allochan
```

```
#pragma section(".i_alc$z", read)  
__declspec(allocate(".i_alc$z")) const _PVFV  
i_allochan_end = (_PVFV)1; // a na konec sekce .i_alc si  
dame promennou i_allochan_end
```

The comments in the given C++ code are in Czech, and they translate to English as follows:

- `// na zacatek sekce .i_alc si dame promennou i_allochan` translates to `// at the beginning of the .i_alc section, we put the variable i_allochan.`
- `// a na konec sekce .i_alc si dame promennou i_allochan_end` translates to `// and at the end of the .i_alc section, we put the variable i_allochan_end.`
