Help me install ComfyUI using the README
<https://raw.githubusercontent.com/doctorpangloss/ComfyUI/installable/README.md>

It looks like the README file for ComfyUI provides detailed instructions for installing the software on different platforms. Since you didn't specify the operating system, I'll provide the instructions for Windows. If you need instructions for another operating system, please let me know.

Installing ComfyUI on Windows

- 1. Install Python 3.11:** You can download the appropriate .exe file from the [official Python website](#) and double-click on it to follow the installer. Alternatively, you can use Chocolatey to install Python via the command line.
- 2. Open a Command Line:** You can use either cmd.exe or PowerShell. Press `Win + R`, type `cmd` or `powershell`, and press Enter.
- 3. Create a Virtual Environment:** Open the command line and execute the following command to create a virtual environment:

```
shell
```

```
python -m venv venv
```

 Copy code

- 4. Activate the Virtual Environment:** In PowerShell, execute the following command:

```
powershell
```

≡ ChatGPT 5.2 ▾

-
- 5. Install ComfyUI:** Execute the following command to install ComfyUI:

```
shell
```

 Copy code

```
pip install git+https://github.com/doctorpangloss/ComfyUI.git@installal
```

6. **Create Directory for Models:** Execute the following command to create a directory path for models:

shell

 Copy code

```
mkdir models\checkpoints
```

7. **Download Required Model:** Download the required model using the following command:

shell

 Copy code

```
curl -L https://huggingface.co/runwayml/stable-diffusion-v1-5/resolve/r
```

8. **Start ComfyUI:** Simply type the following command to start ComfyUI:

shell

 Copy code

```
comfyui
```

9. **Visit the URL:** The console should output a URL to visit, usually `http://127.0.0.1:8188` . Open this URL in your browser.

Notes

- If you're not familiar with command-line commands, be careful with typos and case sensitivity errors.
- If you encounter any problems, feel free to ask for help, and I'll assist you with troubleshooting.

Standalone Version

If you prefer a standalone version for Windows that works with Nvidia GPUs or CPU only, you can download it from the [releases page ↗](#). Simply download, extract with [7-Zip ↗](#), and run. Make sure to place your Stable Diffusion checkpoints/models in the `ComfyUI\models\checkpoints` directory.

If you need further assistance or instructions for another operating system, please let me know!
