`Time.zone.at(params.delivery_watermark.to_i).to_datetime`
me does it return utrc

No, `Time.zone.at(params.delivery_watermark.to_i).to_datetime` does not return the time in UTC by default. This code will convert the given timestamp (`params.delivery_watermark.to_i`) to a `DateTime` object in the current time zone set for your Rails application, not necessarily in UTC.

If you need the time in UTC, you should explicitly convert it to UTC. For instance:

ruby

 Copy code

```
Time.zone.at(params.delivery_watermark.to_i).to_datetime.utc
```

This will ensure that the resulting `DateTime` object is in UTC.
